# Mini Project 1:ATM System using Python

---

## 1. Project Title

ATM System using Python

---

## 2. Problem Statement

To design and implement an ATM system that allows users to perform banking operations such as checking balance, withdrawing money, depositing money and exiting using a menu driven approach.

---

## 3. Objective

- To simulate basic ATM operations
- To use menu driven programming
- To understand loops and conditional statements
- To implement real-life banking logic

---

## 4. Tools Used

- Python 3
- VS Code / IDLE

---

## 5. Description

This project simulates the working of an ATM. The user can select options from the menu to check balance, deposit money, withdraw money or exit. The balance gets updated after each transaction.

---

## 6. Algorithm

1. Initialize balance
2. Display ATM menu
3. Read user choice
4. If choice is deposit → add amount
5. If choice is withdraw → subtract amount
6. If choice is balance → display balance
7. Repeat until exit

---

**7. Program (Python Code)**

```
balance = 5000

while True:
    print("\n----- ATM Menu -----")
    print("1. Check Balance")
    print("2. Deposit")
    print("3. Withdraw")
    print("4. Exit")

    choice = int(input("Enter your choice: "))

    if choice == 1:
        print("Your Balance = Rs.", balance)

    elif choice == 2:
        amount = float(input("Enter deposit amount: "))
        balance = balance + amount
        print("Amount deposited successfully")

    elif choice == 3:
        amount = float(input("Enter withdraw amount: "))
```

```
    if amount <= balance:
        balance = balance - amount
        print("Please collect your cash")
    else:
        print("Insufficient balance")

elif choice == 4:
    print("Thank you for using ATM")
    break

else:
    print("Invalid choice")
```

---

**8. Sample Output**

```
*IDLE Shell 3.11.0*
File  Edit  Shell  Debug  Options  Window  Help
----- ATM Menu -----
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Enter your choice: 2
Enter deposit amount: 2000
Amount deposited successfully

----- ATM Menu -----
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Enter your choice: 1
Your Balance = Rs. 7000.0

----- ATM Menu -----
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Enter your choice: 3
Enter withdraw amount: 5900
Please collect your cash

----- ATM Menu -----
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Enter your choice: 1
Your Balance = Rs. 1100.0

----- ATM Menu -----
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Enter your choice:
```

---

## 9. Result

The ATM system successfully performs deposit, withdrawal and balance enquiry operations.

---

## 10. Conclusion

This project demonstrates how Python can be used to build a simple ATM system using loops and conditions.
